Suitable For Line Speeds Of Up To 5000 Pieces / Minute

MS35K PRO With Ip67 Controller

Built In High Power LED Lighting

Optional Multi-Bay Server DVR # 4D

Optional Portable "All-In-One" DVR #4S

Why Data Acquisition?

The MS 35K PRO High Speed Camera Features Multi-Channel Data Acquisition.

Your High Speed Video Will Let You Visually See What Went Wrong With The Process However With Just Visual Information, It Is Difficult To Understand Which Control Signal Or Machine Action Is Causing The Problem. It Is The Data From Your PLC Or Other External Sensor Signal That Will Let You See Which Control Signal Is Out Of Sequence With The Rest Of Your Production Cycle. All External Data Inputs Are Recorded And Tagged In Real Time To Each Frame So That You Can See Their Impact On Your Frame By Frame Review Of The Video.

The Mega Speed 35K PRO Camera Control Software Is A Complete Software Package That Is Included With Each System. With The Camera Control Software You Can Simultaneously Adjust The Camera Settings, Record The Process, Review The Recently Recorded Events, Edit, Play Back, Review the Data Acquisition And Transfer Files, All Without Stopping The Recording Process.
